

# AI Ops Agents

The weekly reports, chases and briefs, done before you get in.

We build, run and tune AI agents that take the repetitive analysis and follow-up off your operations team: the plan-versus-actual brief, the exceptions list, the supplier chase, the board-pack narrative. Each agent works from your data with your access rules, and a person approves anything that leaves the building.

## AGENTS WE BUILD

### Plan-versus-actual brief

The weekly variance story, with causes and owners.

### Exception watcher

Late orders, stockouts and missed targets, flagged daily.

### Supplier chase

Follow-ups drafted for late confirmations and shipments.

### Ops digest

One morning summary from the reports nobody reads.

### Board-pack narrative

Monthly commentary drafted from the numbers.

### Complaint triage

Customer issues sorted, routed and summarized.

## PRICING

- Setup: \$4,500 to \$7,500 per agent, depending on data sources
- Standard agent: \$1,750 a month (reads reports and email, writes briefs)
- Advanced agent: \$2,950 a month (connects to ERP or CRM, prepares actions)
- Three agents: \$6,500 a month
- Six-month minimum, then month to month

## HOW IT RUNS

|                  |                                      |
|------------------|--------------------------------------|
| <b>Week 1</b>    | Pick the agent, map data and access  |
| <b>Weeks 2-3</b> | Build and test on real data          |
| <b>Week 4</b>    | Live, with a person approving output |
| <b>Monthly</b>   | Tune, report usage and value         |

## PER AGENT FROM

**\$1,750/mo**

Setup \$4,500 to \$7,500 per agent. Standard \$1,750 a month, advanced \$2,950 a month, or three agents for \$6,500 a month. Six-month minimum.

## BUILT FOR

Mid-market operations, supply chain and finance teams that spend too many hours building the same reports and chasing the same answers every week.

## WHAT IT IS NOT

- Not a customer-facing chatbot
- Not autonomous: a person approves anything sent outside
- Not software you maintain: we run and tune it
